

# Seeking expanded indication for medical device

## Ablative Device

35 Sites	~600 pts	18 month enrollment	Up to 24 month follow up
----------	----------	---------------------	--------------------------

## Challenges

To describe real-world patterns of use for an oncology device to treat a gastrointestinal cancer, including patient, disease, physician and site characteristics:

- Prospectively collect and transform disparate data into a usable source, including PROs
- Evaluate safety and outcomes

## Solution

- Form comparator cohorts
- Use EMR and other system extraction (including clinical notes and PROs)
- Reduce burden for monitoring
- Reduce bias
- Improve data completeness for untreated patients
